Batch: 2028
Degree: B.E - AI & DS

2024_28_III_OOPS Using Java Lab

2028_REC_OOPS using Java_Week 8_Q3

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a user registration system, there is a requirement to implement a username validation module. Users attempting to register must adhere to specific criteria for their usernames to be considered valid.

Your task is to develop a program that takes user input for a desired username and validates it according to the following rules:

The username must not contain any spaces.The username must be at least 5 characters long.

Implement a custom exception, InvalidUsernameException, to handle cases where the entered username does not meet the specified criteria.

Input Format

The input consists of a string S, representing the desired username.

Output Format

If the username is valid, print "Username is valid: [S]".

If the username is invalid:

1. If the username is short, print "Invalid Username: Username must be at least 5 characters long"
2. If the username contains spaces, print "Invalid Username: Username cannot contain spaces"

Refer to the sample output for formatting specifications.

Sample Test Case

Input: John
Output: Invalid Username: Username must be at least 5 characters long

Answer

```java
// You are using Java
import java.util.*;
class InvalidUsernameException extends Exception
{
    public InvalidUsernameException(String message)
    {
        super(message);
    }
}
class Main
{
    public static void validateUsername(String str) throws
InvalidUsernameException
    {
        if(str.contains(" "))
        {
            throw new InvalidUsernameException("Username cannot contain
spaces");
        }
        if(str.length()<5)
```

```java
        {
            throw new InvalidUsernameException("Username must be atleast 5
characters long");
        }
    }
    public static void main(String[] args)
    {
        Scanner sc=new Scanner(System.in);
        String s=sc.nextLine();
        try
        {
            validateUsername(s);
            System.out.println("Username is valid: "+s);
        }
        catch(InvalidUsernameException e)
        {
            System.out.println("Invalid Username: "+e.getMessage());
        }
    }
}
```

Status : Correct   *Marks : 10/10*
